RE: Flame Retardant in StyroChem Modified EPS

To Whom It May Concern:

The halogenated flame retardant (HFR) used by StyroChem in all modified formulations commencing with an M (example: MB500L) is not HBCD (CAS # 3194-55-6). The proprietary HFR used by StyroChem is not bioaccumulative and has undergone risk assessment in both the EU and Canada. Both assessments ruled that no additional risk-management measures, other than those currently in place, need to be taken.

Warmest regards,
